

# New Normal in Hand Hygiene

**Sinks and soap are mostly  
in bathrooms.**

**We leave the room, go  
down the hall, find the  
third door on the right, just  
to wash hands.**

## Putting handwashing within reach

# In Anganwadi Centres

Let's put Hand Washing Facilities within reach

## What's the problem?

Children can wash their hands much more frequently if sinks are conveniently located and are in the line of sight.

They can be reminded again and again, but without convenient facilities, they might not wash hands regularly; hence it would not become a habit; and unlikely that it will help save lives.

Happy Tap serves as a very strong nudge to wash hands, which can be habit forming in kids with institutions of WCD.

A huge proportion of AWCs and childcare institutions have inadequate hand washing facilities.

Today, most hand washing facilities are available only in the toilet.

Putting hand washing facilities where they're needed is difficult, in part because conventional piped sinks are expensive and require plumbing.

## The new normal for hygiene: Children can wash hands wherever needed

It's not enough to provide sinks and soap only in bathrooms.

Why? Because it's not enough to wash hands only after using the toilet.

The future of basic hand hygiene is washing in more places and at more times.

This requires a shift in facilities management - everywhere in Childcare settings

No more leaving the room, going down the hall, finding the third door on the right, just to wash hands.

Instead, **handwashing within reach.**

# How do we put handwashing within reach now?

Modular, durable, & portable handwashing facilities are being implemented at scale, in a matter of weeks.

Next-generation sinks allow facilities managers to jump straight to the desired outcome:

**Everyone washing hands when and where needed.**

## Introducing HappyTaps: portable, modular next-generation sinks

**Effective:** Referenced by WHO/UNICEF as covid-19 compliant & child-friendly [3]

**Easy to configure for distancing & nudging:** Instant set-up and portability for deployment wherever handwashing is most needed.

**Water-efficient:** Low-flow tap & 15L tank allows for 50-60 uses per fill.

**Durable:** Food-grade material; built to last under tough usage conditions for 5 years. Conditional 1 year warranty.

**Deploy at scale:** mass-produced locally, ships rapidly to anywhere in India.
